

Our structure has always been based on a 2" x 3" center hull stiffener with three 2" channel runners on each side. Bulkhead cross-bracing on 16" centers with box runners to complete the floor system .

The new system starts with the same 2" x 3" center hull stiffener but now we have five 2" channel runners on each side. These channel pieces are now the base of our larger box channels.

Aluminum flooring will now be installed on this platform.

With this new design we have drastically increased the strength of our bottom without increasing the weight of our SportJon.

We constantly strive to build you a better boat.

PHANTOM JET BOATS

"When only the best will do"
